

Amendment to the Specification

Please amend the following paragraphs of the specification as shown. These amendments to the specification introduce no new matter.

Paragraph [0057]

[0057] As will be apparent particularly from Figure 3, the bristles of the brush arrangement 11 extend outwardly from the aperture in the forward compartment 9. In order to remove stubborn debris and/or to revitalise carpet the lower front region of the forward compartment may be chamfered 92, or the front region of the forward compartment may be movable (including removable), to increase the exposure of the bristles in this region. In this way, the forward part of the apparatus may be inclined relative to the surface to be cleaned, thereby increasing contact between the bristles and a surface to be cleaned and, on some surfaces, increasing the depth to which the bristles penetrate and clean the surface.

Paragraph [0063]

[0063] When the intermediate compartment 17 is to be emptied, one wall of the compartment is removed as explained above and the debris can readily be discharged. The removable wall is then replaced. Alternatively, the intermediate compartment may be in the form of a tray 190 as shown in Figure 4, which can be removed and emptied so as to discharge debris.
